SMT power inductors

Size 12.5 x 12.5 x 8.5 mm

Construction

- Ferrite core
- Magnetically shielded
- Winding: enamel copper wire
- Winding soldered to terminals
- Injection moulded base

Features

- High mechanical stability
- Temperature range up to +150 °C
- High rated current
- Increased current handling capability compared to B82477P4 series (I_{sat} +30%)
- Qualified to AEC-Q200
- Suitable for lead-free reflow soldering as referenced in JEDEC J-STD 020D
- RoHS-compatible
- Halogen Free in the meaning of CI \leq 900ppm, Br \leq 900pm, CI+Br \leq 1500 ppm

Applications

- Filtering of supply voltages
- Coupling, decoupling
- DC/DC converters
- Automotive electronics

Terminals

Base material

- Cu (L \leq 10 µH), CuSn6P (L > 15 µH)
- Layer composition Ni, Sn (lead-free)
- Electro-plated

Marking

Marking on component: Manufacturer, L value (µH, coded), manufacturing date (YWWD) Minimum data on reel: Manufacturer, ordering code, L value, quantity, date of packing

Delivery mode and packing unit

- 24-mm blister tape, wound on 330-mm reel
- Packing unit: 350 pcs./reel

Technical data and measuring conditions

Rated inductance L _R	Measured with LCR meter Agilent 4284A at frequency f_L , 0.1 V. +20°C				
Operating temperature range	–55 °C +150 °C				
Rated current I _R	Max. permissible DC with temperature increase of \leq 40 K measured at +20 °C				
Saturation current I _{Sat}	Max. permissible DC current with inductance decrease L/L_0 of approx. 10%				
DC resistance R	Measured at +20 °C				
Solderability (lead-free)	Dip and look method Sn95.5Ag3.8Cu0.7: +(245 \pm 5) °C, (5 \pm 0.3) s Wetting of soldering area \geq 90% (based on IEC 60068-2-58)				
Resistance to soldering heat	+260 °C, 40 s (as referenced in JEDEC J-STD 020D)				
Climatic category	55/150/56 (to IEC 60068-1)				
Storage conditions	Mounted: –55 °C +150 °C Packaged: –25 °C +40 °C, ≤ 75% RH				
Weight	Approx. 4 g

Current derating I_{op}/I_R

B82477R4

SMT power inductors

Size 12.5 x 12.5 x 8.5 mm

Typical curves:

Inductance vs. DC superposition measured with LCR meter Agilent 4284A at T_a = +20 °C

MAG IN PD

SMT power inductors

Size 12.5 x 12.5 x 8.5 mm

Cautions and warnings

Please note the recommendations in our Inductors data book (latest edition) and in the data sheets.

- Particular attention should be paid to the derating curves given there.
- The soldering conditions should also be observed. Temperatures quoted in relation to wave soldering refer to the pin, not the housing.

If the components are to be washed varnished it is necessary to check whether the washing varnish agent that is used has a negative effect on the wire insulation, any plastics that are used, or on glued joints. In particular, it is possible for washing varnish agent residues to have a negative effect in the long-term on wire insulation. Washing processes may damage the product due to the possible static or cyclic mechanical loads (e.g. ultrasonic cleaning). They may cause cracks to develop on the product and its parts, which might lead to reduced reliability or lifetime.

The following points must be observed if the components are potted in customer applications:

- Many potting materials shrink as they harden. They therefore exert a pressure on the plastic housing or core. This pressure can have a deleterious effect on electrical properties, and in extreme cases can damage the core or plastic housing mechanically.
- It is necessary to check whether the potting material used attacks or destroys the wire insulation, plastics or glue.
- The effect of the potting material can change the high-frequecy behaviour of the components.

Ferrites are sensitive to direct impact. This can cause the core material to flake, or lead to breakage of the core.

Even for customer-specific products, conclusive validation of the component in the circuit can only be carried out by the customer.

Display of ordering codes for EPCOS products

The ordering code for one and the same EPCOS product can be represented differently in data sheets, data books, other publications, on the EPCOS website, or in order-related documents such as shipping notes, order confirmations and product labels. The varying representations of the ordering codes are due to different processes employed and do not affect the specifications of the respective products. Detailed information can be found on the Internet under www.epcos.com/orderingcodes
